

## Lab 1: Setting Up Kubernetes and explore kubectl

- Check **nodes** status.

```
k get nodes
```

- Check pods in **all namespaces**.

```
k get pods --all-namespaces
```

```
k get pods -A
```

- Check detailed information about the **worker** node.

```
k describe node <node_name>
```

```
K get nodes -o wide
```

- Check metrics for the **worker** node.

```
k top node <node_name>
```
